EverFlor - Degreaser

Clear liquid degreaser for floor preparation before coating

EverFlor Degreaser is a clear liquid cleaner concentrate for floor preparation. It is used to lift oil, grease and general soiling out of a floor before a coating is applied, and as a cleaner on floors that have picked up contamination in service.

Most floor coating failures start with preparation. A film applied over oil or grease bonds to the contamination, not the substrate, and releases under traffic. Working the degreaser into the surface breaks down the deposits so they can be scrubbed loose and rinsed away, leaving a clean, sound floor to coat onto.

Use it as the first stage of an EverFlor floor coating specification, ahead of any primer or paint. Supplied in 5 litre and 20 litre containers.

Areas of use:

- Preparation of floors prior to painting or coating
- Removal of oil and grease deposits from floors
- General cleaning of contaminated floor areas
- Cleaning down before repair work is carried out

Features:

- Clear liquid, so it leaves no colour behind on the floor
- Supplied as a concentrate, so one container makes up a large volume of wash solution
- Lifts oil and grease out of the surface rather than spreading it around
- Prepares the substrate so the following coat bonds to the floor itself
- Applied with ordinary site kit - stiff broom, brush or mechanical scrubber
- Rinses off with clean water
- Available in 5 litre and 20 litre packs for small areas and full floors

Dilution

The degreaser is supplied as a concentrate. Dilute it with water before use.

Mix 50:1 with water for general cleaning. Mix 20:1 with water for heavy cleaning.

Make up only as much as you can use across the section you are working on.

Good to know

Heavily contaminated floors may need a second pass. Check the surface after rinsing and repeat where staining or a greasy feel remains.

Allow the floor to dry before coating. Trapped moisture in the substrate will affect the coating that follows.

Do not allow washings containing oil and grease to enter surface water drains. Collect and dispose of them in line with local requirements.

Pack sizes: 20 Litre, 5 Litre

EverFlor - Degreaser

1 Surface preparation

Sweep or vacuum the floor to remove loose dirt and debris. Cover or move anything nearby that must not get wet. Split larger floors into sections you can wash and rinse before the degreaser dries on the surface.

2 Dilution

The degreaser is supplied as a concentrate. Dilute it with water before use. Mix 50:1 with water for general cleaning. Mix 20:1 with water for heavy cleaning. Make up only as much as you can use across the section you are working on.

3 Application

Shake the container before use. Spread the diluted degreaser onto the floor with a stiff broom or brush and work it into the contaminated area. Leave it to dwell so it can penetrate the oil and grease. Scrub the area with a stiff broom or a mechanical scrubber to lift the deposits out of the surface.

4 Rinsing and drying

Rinse with clean water, scrubbing while you rinse. Lift the washings with a wet vacuum where they cannot be flushed away. Inspect the floor once rinsed and repeat the process on any area that is still stained or greasy to the touch. Let the floor dry before any primer or coating is applied.

5 Clean up and disposal

Wash equipment with clean water after use. Do not let washings containing oil and grease enter rainwater drains or watercourses. Collect the residue and dispose of it in accordance with local regulations.

6 Safety

Read the safety data sheet for this product before use - it covers the hazards, the protective equipment and what to do if something goes wrong.

7 Ordering

Available direct from Jarvis Industries Ltd. All products are sold subject to the company's standard conditions of sale.

EverFlor - Degreaser

Specification

Appearance	Clear
Suitable for	Preparation of floors prior to painting or coating; removal of oil and grease deposits from floors; general cleaning of contaminated floor areas; cleaning down before repair work is carried out
Pack sizes	20 Litre, 5 Litre

Drying and curing times are given at 20 °C and 50% relative humidity.

Storage & Handling

- Store upright in the original tightly closed container, in a cool, dry, well-ventilated place out of direct sunlight.
- Protect from frost.
- Keep out of the reach of children.

The information in this sheet is given in good faith and reflects our experience of the product at the date of issue. Conditions of use are outside our control, so it does not amount to a warranty. Anyone using the product should satisfy themselves that it is suitable for the intended purpose, and where the result matters, apply a trial area first.
